GD&T Training Program

What is GD&T?

Geometric Dimensioning and Tolerancing (GD&T) is an international engineering language that is used on engineering drawings to describe products in three dimension. GD&T is a precise mathematical language that describes the form orientation and location of part features in zones of tolerance. Although the intent of GD&T is to more clearly communicate a components physical size and shape parameters, it is much too often misapplied and misunderstood.

This course explains the theory, terminology and practice including use of datums, form profile and orientation symbols and the use of material condition modifiers. MTS certifications are equivalent to AMSE Y14.5 - 2009.

Course Info

Class Dates

2 Days (16 hours)
April 18th and 20th

Class Times

Classes will be from 9:00am to 5:00pm
There will be a 30 minute break for lunch at 12:30pm.

Class Cost

$900 per student instructor-led online or at MTS
For onsite training, there is an $800 per day instructor fee + student fee (Minimum 5 students)
(Travel expenses not included)
